

Wet/dry vacuum cleaner CYCLONIC WORKER

Description

This Cyclonic Worker Hoover is a great help in a thousand situations! This wet/dry Hoover makes it easy to keep the house, workshop, garage, office, shop, etc. clean and tidy. In emergency or maintenance situations, this Hoover can suck up liquids to the last drop. The motor head of the Hoover is equipped with an electronic sensor for an indication of the maximum liquid level. When triggered, the vacuum is immediately stopped, preventing vital machine parts from getting wet. This vacuum is also equipped with a power socket, which allows connected power tools to be powered, so you don't need an extension cord. The socket (Shuko type) supplies 230 V AC, up to a maximum power of 2000 W and is activated automatically as soon as the power tool starts up (automatic start function). The cyclonic filter the Hoover is equipped with ensures that most of the dust sucked up is removed before it reaches the HEPA filter. The steel container has a cap on the front of the base, allowing the liquid to be emptied without having to tilt the container. The capacity of the container is 30 litres. At the top of the Hoover, the hose can be connected to the air inlet port, for normal suction function, or to the outlet port, for blowing function, super convenient in many situations.

Features:

- Connection diameter accessories 34 mm.
- Integrated storage for accessories side on the machine housing.
- Motor head with electronic sensor for indication of maximum fluid level
- Equipped with Shuko socket with automatic start function
- Base with 4 castors, 2 of which are swivel castors
