

V-belt large capacity profile DIN 7753

Description

These high-performance universal V-belts are easy to install and remove and require little maintenance.

These high-performance narrow profile V-belts have excellent running properties. They are generally used industrially in large installations, heavy machines, fans, conveyor technology, food technology, compressors, etc. to transmit power from motors to equipment.

The high-performance V-belts with narrow profile (according to DIN 7753) have a higher profile and can transmit greater force than V-belts with a classic profile.

This type of V-belt is not provided with a sheath. They have - ground - open flanks and are provided with teeth. They are more wear-resistant and can transmit more power than sheathed V-belts.

Thanks to the teeth and the absence of the shell, they are more flexible than V-belts with a narrow profile. This allows the belt to be used on smaller pulleys. This type of V-belt is therefore the most suitable choice in many situations.

Features:

- Excellent wear resistance
- High performance
- Maintenance-free
- Quiet running
- Oil-resistant
- Anti-static and dust-resistant

Extra information

Item number	31111206	
Model	HU 10.00 x 670 HPT	
EAN	8718242580144	
Article group	HUVEMA Onderdelen	
Brand	Huvema	
Features	683 mm	
	632 mm	
	670 mm	
	Profile	XPZ
	Width	10 mm
	Height	8 mm
	56 mm	
Model	670	
Article group code	2178207
